How to Use Math Doodles Foldables

The best way to properly print the foldables is to print each page (front and back) and then glue them together using the printing orientation guide in this PDF. Keep this correctly glued front to back paper in a file folder as a master student copy. At your school copier, print 2 sided copies and give one to each student. Play the folding video (the link is provided in this PDF) for the students to see how to fold the paper. Many students like to try to figure it out before the video starts. I always had the students that loved to fold help those that don't get folding. Folding is a good way to get them engaged and interested in the note taking process!

There are a few ways to get the information to the students for them to fill out the foldable correctly. One way is to model filling it out on an overhead projector using a document camera. This is the method I prefer. I like asking students (before I give them the answer) to guess or make a prediction of what the answer might be. It is a good way to keep the class engaged as you explain the content. Another option is to use the PowerPoint provided. It gives the correct answers to fill in and works through the problems. If using the PowerPoint, the teacher can explain the concepts while clicking through the slides.

Have students fill in the foldable and add color. At the end of class have the students glue them in their notebook. It is easier to write on it before it is glued in. At the end of the year the students will have an awesome interactive notebook that is their "textbook" filled with content for them to review and study. It is a great tool for students to share with parents that might be trying to help them understand math. The parent has a step by step guide explaining each concept. Students love these! Parents love these! Have fun and enjoy helping your students build their best math interactive notebook ever!

Printing Orientation and Folding Movie

When printing the PDF file, open it in ADOBE READER and check "actual size"

Take this sheet to the printer to assure you print them correctly.

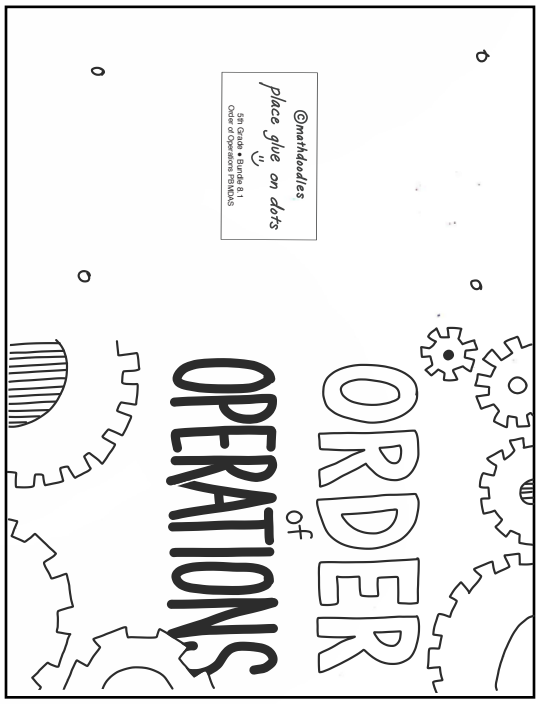

It is ***extremely important*** to properly print these pages front to back. A great idea is to print the front and back sheets separately and glue them together using this guide. Save this "glued together" master in a file and use this to make student copies.
